

elegance for the modern sophisticated bathroom

VENUS
TOWEL RAILS

The EHC Venus Towel Rails are the ideal compliment to our EHC Electric Combination Radiators and the Mercury Wet System Radiators.

Like all EHC Products the Venus Range is manufactured to the highest standard and offers a premier performance to suit your needs.

This stylish range is suited to both Domestic and Commercial purposes and comprises of three sizes and outputs in a Cosy Chrome finish. The ladder style design of the radiator coupled with its gentle curve provide an elegant and practical solution for the modern sophisticated bathroom.

The Venus rails can be installed as part of an integrated Wet Central Heating System and as such we would recommend the award winning Fusion Electric Boiler complete with the Mercury Wet Radiators if you are considering replacing your current Central Heating System.

If you are replacing your Storage Heating System we would recommend that you install the Venus Electric Towel Rail in conjunction with our EHC Electric Combination Radiators. Alternatively you may prefer to install the Venus Electric Towel as a stand alone heater. Due to the versatility of the Electric models they can be operated by either our Standard Thermostat or the Deluxe Thermostat Controller.

With the various alternatives available on the market today choosing the right option can often be confusing and as such our highly experienced staff would welcome the opportunity to discuss all your heating requirements and advise you accordingly.

All Venus Towel Rails are guaranteed for 5 years, the electric heating element and controls for 1 year.

For further information on our complete range of central heating products please visit our website at www.electric-heatingcompany.co.uk or telephone 01698 820533.

STANDARD THERMOSTAT CONTROL

This Control is electromechanical and uses traditional bimetallic technology to regulate the room temperature. It measures the room temperature and if it is lower than the set temperature, the heating element is switched on until the desired temperature is achieved.

DELUXE THERMOSTAT CONTROL

The Deluxe Control uses a very accurate micro-processor that regulates the room temperature without being influenced by external conditions or the radiator temperature. The thermostat uses proportional integral (PI) technology. The PI thermostat 'learns' how much energy is required to keep the room temperature close to the desired set temperature which consequently not only gives increased comfort, but also saves energy. A two hour boost facility is available on this controller.

Visit our website for further information on the complete range of EHC products.

TOWEL RAIL SPECIFICATIONS

Description	Rating Watts	Rating Btu's	IPX4 Rated	Element					Product Code
				Length (mm)	Width (mm)	Height (mm)	Depth (mm)	Weight (kg)	
Venus Curved Chrome Wet	308	1051		450	700	70	5.2	VCW700/450
