COMMERCIAL RANGE

Powerful heating solutions for larger properties and demanding applications.

COMET PV

VOLTIVUS

VALERIUS

The **Voltius electric boiler** range is available in three high capacity outputs to serve larger commercial installations like offices, hotels and schools.

For larger output requirements, these boilers can be combined on a low loss header to increase the overall output which gives endless install solutions.

Voltius features:

- Outputs: 60kW, 80kW & 100kW
- Virtually silent
- Can be used for underfloor heating, radiators or fan coils
- Soft start fully modulating elements
- ERP Circulation Pump with pump protection
- Underfloor heating mode
- Adjustable output capacity
- Automatic frost protection
- Volt-free control connections
- In-built fault-finding diagnostics
- Dual high temperature thermal cut-outs
- Digital water pressure sensor
- NTC temperature sensors

Valerius

This high-quality floor-standing boiler can be cascaded with up to 10 boilers using our cascade regulator for use in small or large commercial applications.

Valerius features:

- High quality floor-standing boiler
- Can be cascaded with up to 10 boilers using cascade regulator
- Can be operated via simple make & break contact
- Independent operation or Cascade operation via BMS
- Elements can be range rated with fully automatic modulation
- Has the ability to utilise Outdoor Temperature Compensation
- Pipe Connections DN65 (2 1/2") PN16 Flange.

Cascade regulator:

The cascade controller distributes power to individual boilers so that all available boilers are loaded as evenly as possible.

This enables the boilers to work at optimal efficiency - maximising the life of the boiler.

Cascading Comet PV

Our **Comet PV** cascade and intelligent zone controls bring proven commercial heating technology into large domestic and light commercial installations.

By making boilers, pumps and heating zones work together as one intelligent system, the setup delivers better hydraulic balance, more precise temperature control and reduced energy use, helping the system run more efficiently while sharing the workload across the boilers.

A smarter installation today means more efficient performance, longer system life and potential savings for years to come.
